CENTRE DE FORESTERIE DES LAURENTIDES

Le Centre de foresterie des Laurentides (CFL) est un des six établissements régionaux du Service canadien des forêts (SCF). Le Centre poursuit des travaux de recherche et de développement pour un aménagement et une utilisation plus rationnels des ressources forestières du Québec. En collaboration avec divers groupes et organismes québécois, les chercheurs du CFL visent à acquérir une meilleure compréhension du fonctionnement des écosystèmes forestiers en vue de contribuer à solutionner les problèmes majeurs en foresterie au Québec et à développer des méthodes acceptables pour l'amélioration et la sauvegarde de l'environnement forestier.

Au Québec, les activités du SCF portent sur trois éléments majeurs: la recherche dans le domaine des ressources forestières, la recherche dans le domaine de la protection et enfin, le développement forestier. La plupart des travaux sont entrepris pour répondre aux besoins des organismes intéressés à l'aménagement forestier, surtout dans le but d'améliorer la protection, la croissance et la qualité de la ressource forestière de la région. L'information est diffusée sous forme de rapports scientifiques, de feuillets techniques ou autres publications dans le but d'atteindre toutes les catégories d'utilisateurs des résultats de recherche.

LAURENTIAN FORESTRY CENTRE

The Laurentian Forestry Centre (LFC) is one of six regional establishments of the Canadian Forestry Service (CFS). The Centre's objective is to promote, through research and development, the most efficient and rational management and use of Quebec's forest. In cooperation with several Quebec agencies, scientists at LFC seek to acquire a better understanding of how the forest ecosystem works with a view to solving major forestry problems and develop methods to improve and to protect the forest environment.

In the province of Quebec, CFS's program consists of three major elements: forest resources research, forest protection research, and forest development. Most of the research is undertaken in response to the needs of forest management agencies, with the aim of improving the protection, growth, and quality of the region's forest resource. The results of this research are distributed to potential users through scientific and technical reports and other publications.

INTRODUCTION

En 1952, la Division de la biologie forestière du ministère de l'Agriculture du Canada créait au Québec un laboratoire qui avait pour mandat d'effectuer des recherches en entomologie et en pathologie forestières. Par la suite, ce laboratoire passa au Service canadien des forêts, et il est actuellement connu sous le nom de Centre de foresterie des Laurentides (CFL). La collection d'insectes du CFL existe également depuis 1952, puisque dès ce moment, des insectes furent conservés comme spécimens de référence.

La majorité des spécimens en collection furent obtenus à partir d'élevages réalisés en laboratoire par l'équipe de diagnostic du Relevé des insectes et des maladies des arbres (RIMA). Ces élevages furent initiés à partir des collections d'insectes, plus particulièrement au stade larvaire, apportés par les techniciens du territoire oeuvrant dans la section RIMA du CFL. Un certain nombre d'espèces furent aussi obtenues à l'aide de pièges lumineux. Des collections individuelles faites par des entomologistes du Centre, ainsi que des spécimens provenant de d'autres institutions, ont contribués à enrichir cette collection.

INTRODUCTION

In 1952, the Forest Biology Division of the Department of Agriculture Canada, set up a laboratory in Quebec to carry out research on forest insects and diseases. This laboratory eventually fell under the direction of the Canadian Forestry Service and today it is known as the Laurentian Forestry Centre (LFC). The insect collection at LFC also exists since 1952 from which time insects were preserved as reference specimens.

Most of the specimens in collection were raised in the laboratory by the Forest Insect and Disease Survey's (FIDS) diagnostic team. Insects were raised from collections, especially of larvae, made by FIDS-LFC rangers. Some were also obtained from light traps. Specimens collected by the Centre's entomologists and those from other institutions served to enrich the collection.

There are now more than 3 200 insect species, under one form or another, in our collection. Fifteen orders are represented. The largest collections are those of Lepidoptera with about 1 200 species, Coleoptera with 900 species, and Hymenoptera with 500 species. More than 3 000 are mounted on pins, while almost

Le nombre total d'espèces d'insectes conservés sous une forme ou l'autre dépasse 3 200. Quinze ordres sont représentés. Ceux comportant le plus grand nombre d'espèces sont les Lépidoptères avec environ 1 200 espèces, les Coléoptères avec près de 900 et les Hymenoptères avec plus de 500. Au-delà de 3 000 espèces sont montés sur épingles, alors que près de 500 autres sont conservées dans l'alcool. Un certain nombre de spécimens sont conservés par lyophilisation et quelques autres font partie de montages (Riker Mounts). Dans la liste ci-jointe, les insectes épinglés sont identifiés par la lettre "E" sous la colonne collection (COL.). Ceux conservés dans l'alcool sont identifiés par "A", ceux lyophilisés par "L" et ceux montés (Riker Mounts) par "M".

Cette liste contient aussi la collection de diapositives d'insectes du CFL. La très grande majorité des photos d'insectes ont été prises en laboratoire par les auteurs Thérèse Arcand et Jean-Paul Laplante. Nous possédons sur diapositives couleurs, l'un ou l'autre des stades de développement de 912 espèces d'insectes. Pour certaines espèces, un seul stade est illustré alors que pour de nombreuses autres, plusieurs stades sont photographiés. Les différents stades illustrés de chaque espèce sont

500 are preserved in alcohol, some of the specimens have been lyophilized (freeze-dried), and a few others are kept in Riker Mounts. In the following listing, under the collection column (COL.), those insects pinned are identified by the letter "E", those in alcohol are identified by an "A", those lyophilized by an "L", and those in Riker Mounts by an "M".

This list also contains slides of insects. Many of these photos have been taken by Thérèse Arcand and Jean-Paul Laplante. We have on color slides, 912 insects species at different stages of development. For some species, only one stage is illustrated while for several others several stages have been photographed. The different stages illustrated are identified in the slide column (DIAPO.) by "O" for egg, "L" for larvae, "C" for chrysalis, cocoon or pupae, and "A" for adult. "M" indicates a macroscopic photo of insect damage or a close-up of damage. "F" indicates that the photo was taken in the forest, generally by FIDS forest rangers. These photos may represent damage to a branch, a tree, or the forest stand.

The LFC insect collection contains several species not mentioned in this publication. The identification of these

identifiés par la lettre "O" pour oeuf dans la colonne diapositive (DIAPO.). Les autres stades inscrits sont "L" pour larve, "C" pour chrysalide, cocon ou nymphes, et "A" pour adulte. Le "M" identifie une photo macroscopique d'un dégât ou simplement un gros plan du dégât. Le "F" indique que la photo fut prise en forêt, généralement par les techniciens du territoire de RIMA. Elle représente normalement l'ensemble du dégât sur une branche, sur l'arbre ou sur la forêt.

La collection d'insectes du CFL comprend plusieurs autres espèces non mentionnées ici et dont l'identification est incomplète, incertaine ou en révision. De plus, un chercheur de ce laboratoire possède une collection très importante de pucerons (Homoptères) qui n'est pas inclue ici.

La nomenclature utilisée est généralement la plus récente disponible. Nous donnons, à la page 5, les noms d'auteurs au complet correspondant aux abréviations utilisées dans la liste.

REMERCIEMENTS

Les auteurs remercient Ginette Laroche et Robert Laguë de la section informatique du CFL, pour l'intérêt exprimé et la collaboration importante qu'ils nous ont donné durant le montage proprement dit de cette liste.

insects is not complete, or it is uncertain, or under revision. Also, one of our scientists has an important collection of aphids (Homoptera) which has not been included in this list.

The most recent available nomenclature has been used. On page 5, we have listed the authors' names and the corresponding abbreviations.

ACKNOWLEDGMENTS

The authors thank Ginette Laroche and Robert Laguë of the LFC Data Processing Section, for their interest and important collaboration during the compiling of this list.
